Interactive lecture and very interesting content from clinical cases that we see everyday in our practice

# ABSTRACT

Dental implantology demands a comprehensive understanding of both clinical expertise and legal considerations to navigate potential pitfalls and complications. We'll cover how to avoid clinical complications for various cases ranging from simple one implant cases to full mouth dental implants cases with complications and illustrate how to avoid and how to resolve them.

The lecture is fun and interactive showing mostly clinical cases. We begin by emphasizing informed consent, documentation, and risk management strategies vital for mitigating legal complications. Moving into clinical aspects, the lecture highlights preoperative assessments, patient screening, meticulous treatment planning, and advanced techniques aimed at averting surgical and prosthetic complications. This lecture aims to equip dental professionals with proactive strategies to prevent complications, promoting patient trust and safeguarding against legal challenges in the dynamic field of dental implantology.

# WHAT WILL AUDIENCE LEARN?

- Avoiding clinical and legal complications with proper treatment planning and appropriate work flow.
- Learn management of surgical and restorative complications.
- CBCT. Is it standard of care? Value? need and use?
- Restoratively driven implant placement. start with the restorative end in mind.
- How to restore challenging cases.
- Predictable placement. What does that mean?
- Different Implant restorative options and requirements.
- Learn management of broken screw and retrieval of Implant fixture.
- Endo vs Implant myth.
- Know what you are working with. Different systems, Different techniques.
- Immediate Implant placement. Benefits and pitfalls.
- In-office 3D printing. Is it worth it? In-office 3D printed surgical guide
- Swelling, Ecchymosis and Hematomas.
- Implant restoration and cosmetic night mares
- Combining orthodontic and implant treatment
- Immediate vs delayed loading
- Intra-Operative Complications. Complications during placement and how to manage.
- Managing low bone density, Spongy bone cases.
- Implants placement in heavy bruxer and sleep apnea patients.
- Implants, sleep apnea and Emphysema
- Short Implants vs Long Implants
- Patient current medications and medical history and implant healing Medical/Medication Complications
- Flap design and Bone Grafting Complications
- Sinus Grafting Complications
- All-On-X Complications
- Navigating anatomical challenges during placement
- Immediate Loading vs delayed.
- Neurosensory Impairment

## BIOGRAPHY OF PRESENTER

**Mohamed Attia**  
**DDS, MAGD, DABOI, FAAID**

Dr Attia is a Master of the Academy of General Dentistry (MAGD) and Diplomate of the American Board of Oral Implantology (ABOI Diplomate), A Fellow of the American Academy of implant Dentistry (AAID) and also a Diplomate of the international congress of Oral Implantology (ICOI).

He graduated 2002 and upon graduation he completed three years of post-graduate general practice residency programs GPR which honed his skills and experience. Dr Attia is dedicated to continuing education and always seeks excellence in dentistry. He enjoys providing his patients with the utmost treatment using the latest dental technology available like same day crowns through the CEREC machine and precise planed surgery through the CT scan/ CBCT and 3D printer technology and many more.

- Mastership Academy of General Dentistry
- Diplomate American Board of Oral Implantology
- Fellow American Academy of Implant Dentistry
- Diplomate international congress of Oral Implantologists
